Customers are satisfied with Outpost24's ease of use and technical support

Continuously Monitor Your Attack Surface

Visible risks are just a small part of your security posture.

Hidden threats in Cloud, SaaS, and supply chains put infrastructure, apps, and users at risk.

We help identify and protect against evolving cyber threats with ongoing management as an extension of your security team.

The Growing Attack Surface

As businesses embrace Cloud, SaaS, and Supply Chain solutions, and entail Shadow IT, their attack surface expands.

Increasing Sophistication of Cyber Threats

Cyber threats are becoming more advanced, using techniques like AI and automation, making traditional security methods inadequate.

€10.5 Trillion

Predicted global cost of cybercrime in 2025

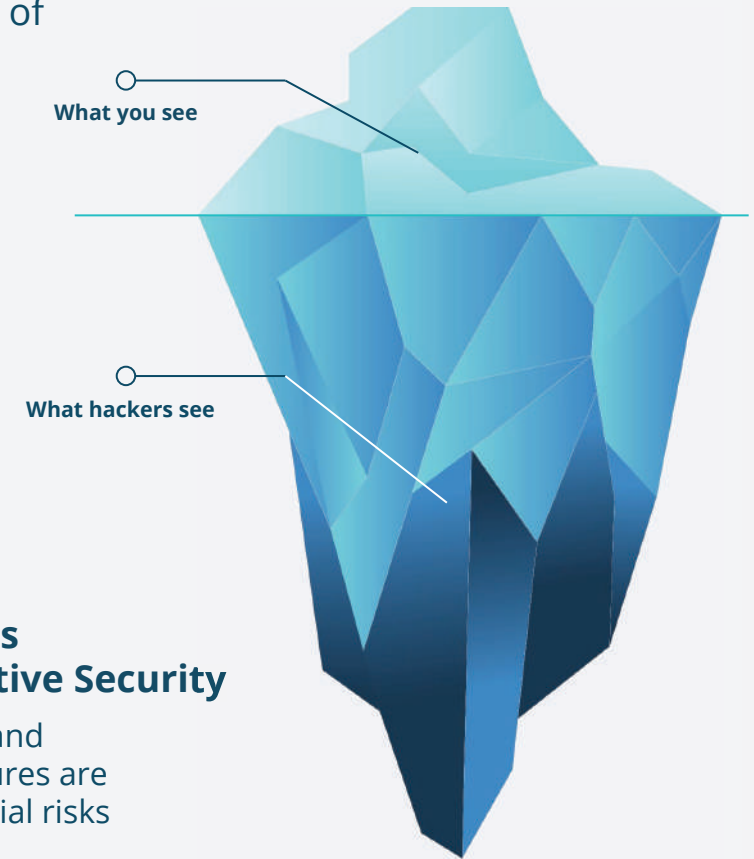

39 secs

Cyberattacks occur every 39 seconds

Need for Continuous Monitoring & Proactive Security

Continuous monitoring and proactive security measures are vital for detecting potential risks early and proactively.

Our Global Presence

14
Global Offices

Outpost24 maintains a strong global presence with offices across Europe, North America, and Asia. Our global headquarters are in Karlskrona, Sweden, with the US headquarters situated in Philadelphia.

Our Global Customers

3000+
Satisfied Customers

Over 3000 customers in 80+ countries trust us to find their security risks before cybercriminals do.

Portfolio Outpost24

Outpost24 is an overall leader in Attack Surface Management in KuppingerCole's 2025 leadership compass

Active Directory Password Security

Mitigate the risk of unauthorized access and bolster network security with industry leading password security solutions natively integrated with Active Directory.

[View Product](#)

IAM

CompassDRP

A unified, cloud-based solution for comprehensive digital risk management. Compass-DRP integrates External Attack Surface Management (EASM) with threat intelligence to provide real-time visibility into your digital footprint.

[View Product](#)

EASM, DRP

Risk-based Vulnerability Management

Automated network and cloud monitoring with risk-based scoring. Leverage real-world threat intelligence to quantify your vulnerability risk and prioritize your remediation workflow by focusing on what matters most.

[View Product](#)

RBVM

Web Application Security Testing

Continuous pen testing with access to security experts for your agile development cycles. Secure your apps against OWASP Top 10 and common software weaknesses.

Key Offerings

1. Specops Software (IAM)

AD Password Security

Specops strengthens IAM by focusing on password and authentication security for organizations that rely on Microsoft infrastructure. Its solutions integrate natively into existing environments, making it easy for IT teams to enforce strong password policies, enable secure self-service and reduce helpdesk risk without needing to overhaul their identity systems

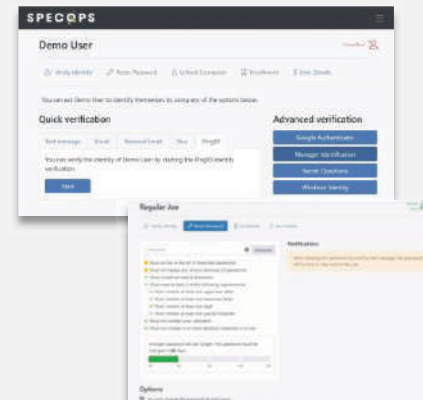

When created

Specops Password Policy

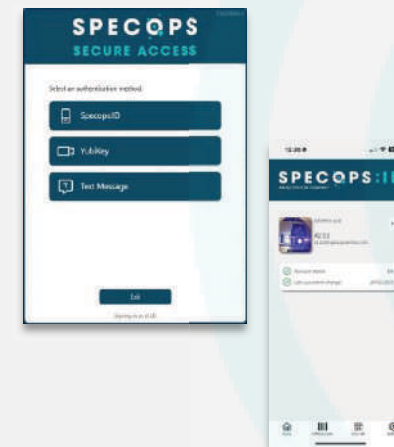

When set/reset by the user

Specops uReset / First day Password

When reset by the helpdesk

Specops Secure Service Desk

At Logon, RDP and VPN

Specops-Secure Access /Specops:ID

2. External Attack Surface Management (**EASM**)

REPRESENTATION

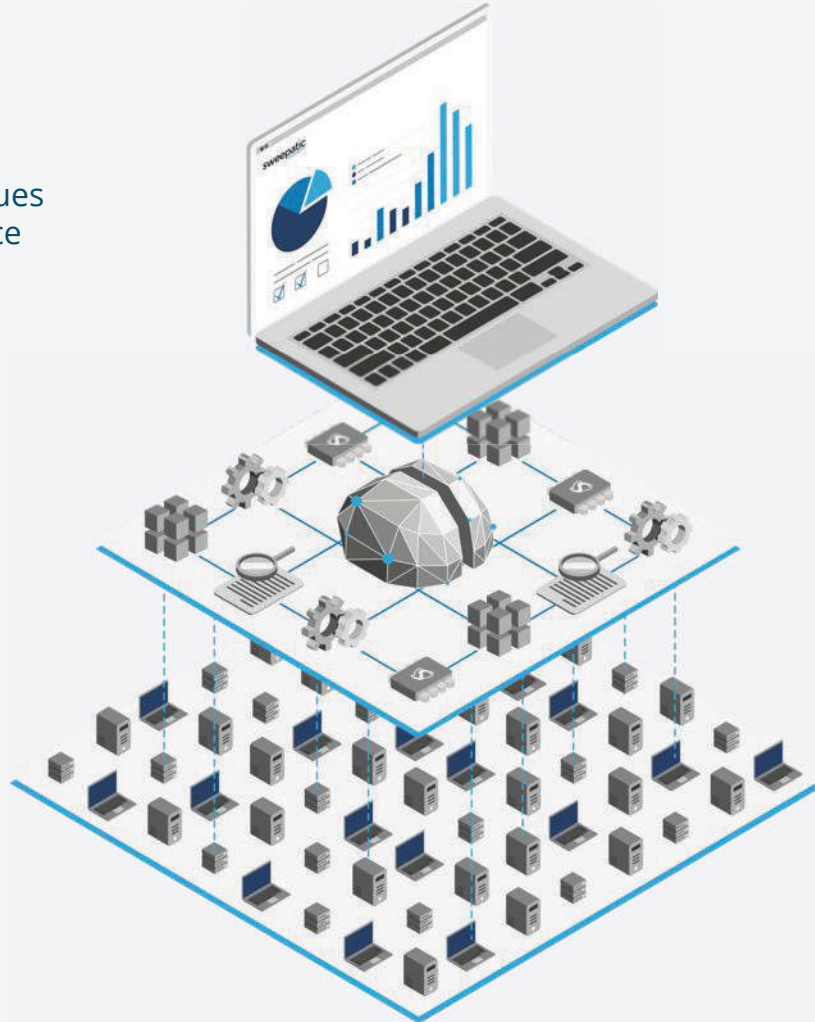

A clear and simple portal allowing to remediate issues in the global attack surface

INTELLIGENCE

Automated analysis of entire attack surfaces in hours

DISCOVERY

Zero-knowledge approach
Automated, central asset register based on advanced reconnaissance

Compass DRP

Seamless Integrations

Integration with communication tools, and Ticketing, ITSM, CAASM, and SOAR systems, including a fully documented Rest API

Actionable Insights

Easy-to-remediate findings and AI-powered insights with high impact, saving time & money

Automated Intelligence

24/7 continuous monitoring built around advanced intelligence layer to find weak spots and cyber risks

Deep & Complete Discovery

Non-intrusive, passive and hybrid discovery of known and unknown assets

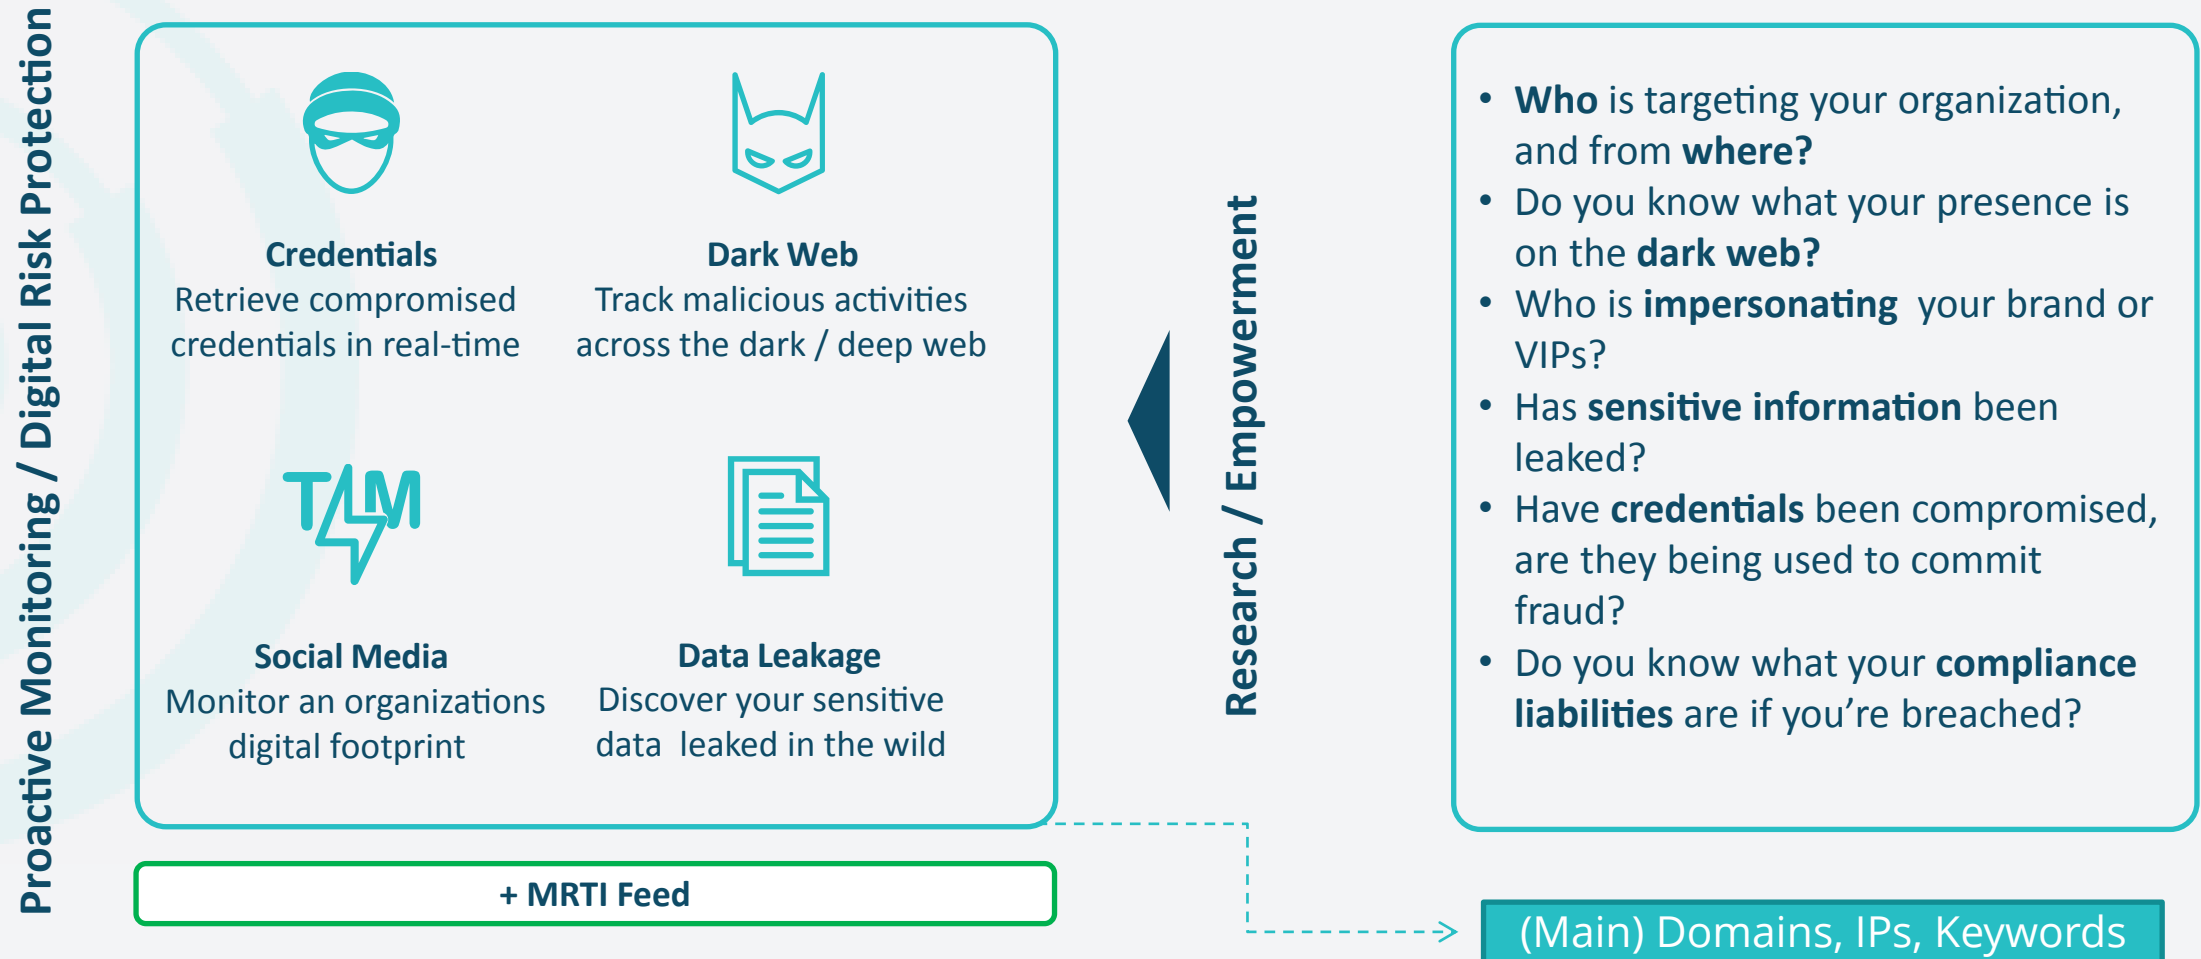

Easy Onboarding

Cloud-native SaaS not requiring any on-premise installation

2. Digital Risk Protection (DRP)

Why Optimize Your Vulnerability Management?

Discovery

Identify every asset in your network, endpoint and multi-cloud infrastructure

01

Prioritize

Identify high risk vulnerabilities and address any security issues before they pose a threat

02

Report

Solution-based reporting for remediation and compliance

03

Remediate

Address security issues, assign resources and manage expectations

04

Verify

Verify the effectiveness of remediation and results using Delta reporting to show changes over time

05

Improve

Regularly repeat and utilize insights in improvement cycle

06

4. Outpost24 PTaaS Portfolio

Outscan (PtaaS)

Flexible Testing Solutions to Fit Every Application Risk Profile

SWAT

Continuous Application Security Testing

- Real - time, dynamic security testing for business critical apps
- Zero false positives and results verified by certified pen testers
- 12-month subscription per application; manual tests conducted periodically by certified pen testers

Snapshot

In-depth Manual Penetration Testing

- Expert-led, manual testing for static web apps
- Zero false positives and results verified by certified pen testers
- 60-day engagement per web app; 12-month period for license usage

Assure

Time-Boxed Penetration Test

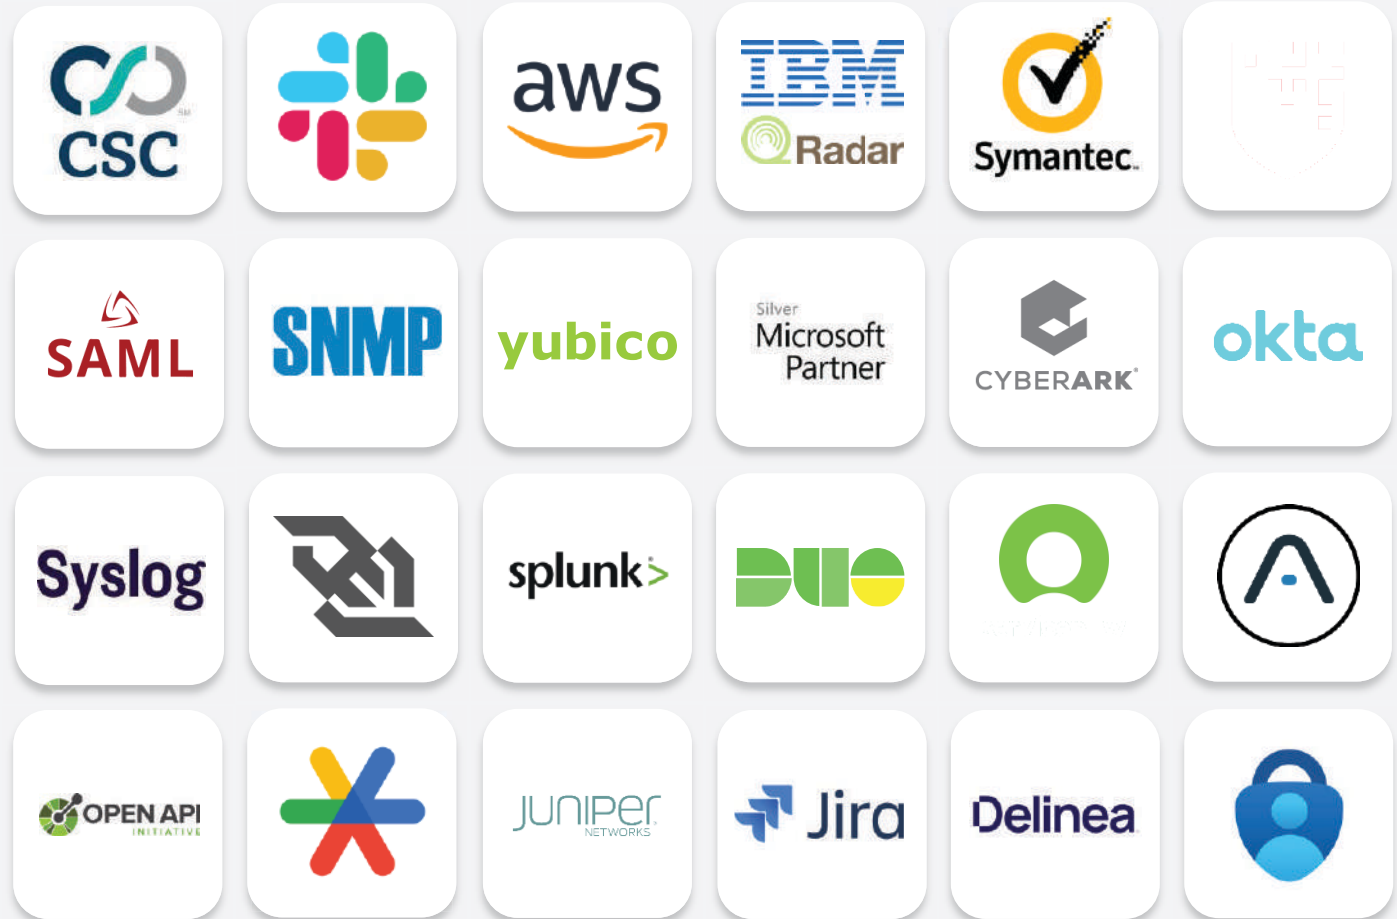

- Baseline security test for rapid vulnerability insights
- Ideal for compliance checks or pre-production environments
- 30-day engagement per application; 12-month period for license usage

- **WebApps**
- **MobileApps**
- **APIs**

Seamlessly integrated in your tech stack
