More Information

OT network connectivity has become a mandatory business requirement. It requires a shift in the security mindset from "How can I air gap or isolate?" to "How can I stay secure while connected?" SCADAfence Platform is a non-intrusive continuous network monitoring solution that was purposely built to provide the required visibility and security for organizations adopting advanced Industrial IoT technologies.

Visibility, Risk Profiling and Threat Detection

- Overall visibility of your environment
- Digitalize your asset inventory with automatic asset discovery and network mapping. This allows users to replace outdated and manually obtained spreadsheets with updated real-time information about their environment.
- Identify where the OT network is exposed to potential risks and what attack scenarios threaten operations. Understand what proactive mitigation steps can be applied to reduce the attack surface and increase the network resiliency.
- Uncover malware and ransomware that threaten operational continuity. Early detection of threats enables effective response before damage occurs, preventing unplanned operational downtime.

Security Compliance & Risk Mitigation

- Multi-Site regulatory and policy compliance framework.
- Compliance policy manager – define required compliance standard.
- Organizational policies compliance management.
- Compliance dashboards – automatically created, and available at all times for compliance visibility.
- Accurate auditing based on real traffic data.

Manage Your Unmanaged IoT Devices

- Vendor-agnostic centralized IoT asset inventory – Unique in the level of detail and wide device support.
- Proactive management of IoT devices for the ongoing reduction of the attack surface.
- Threat detection & prevention – AI-based technology that includes on-site automated learning.
- Multi-layer vulnerability management – IoT Configurations, Firmware/Software versions (CVEs) and Network vulnerabilities.
- IoT device configuration management.
